(Pre)Proceedings of the 6th European Symposium of the International Farming Systems Association, Vila Real, Portugal, April 4-7, 2004-03-09

Coordination:
Artur Cristóvão, Economics, Sociology & Management Department, Universidade de Trás-os-Montes e Alto Douro, Vila Real, Portugal

With the collaboration of: Bernard Hubert, David Gibbon, Donato Romano, Geir Lieblein, Herman van Keulen, Jacques Baudry, Jacques Brossier, Luigi Omodei Zorini, Peter Zander, and Tommy Dalgaard

Word processing and text formatting:
Manuela Mourão

Printing and binding:
Serviços de Reprografia da UTAD, Vila Real, Portugal

Depósito legal: 208393/04

## WORKSHOP 1

**Food System: Food Quality and Safety for Sustainable Rural Development**

*Interdisciplinary Dialogue for Sustainable Systems* ......................................................................................................................................................... 3
  Alice Woodhead, Abigail Jenkins and Roger Packham

*The Role of Geographical Labelling to Insert Extensive Cattle into Beef Marketing Channels. Evidence from Three Spanish Case Studies* .......................................................................................................................................................... 15
  Almudena Gómez Ramos, Isabel Bardají Azcárate and Ignacio Atance Muñiz

*Creating and Fixing Quality Relationships in the Organic Producer to Consumer Chain: From Madagascar to Germany* ...................... 25
  Cathy Rozel Farnworth

*Organic food initiatives and their transformative power on the conventional food system* ................................................................. 41
  Gunnar Vittersø, Bjørn Jansen, Geir Lieblein, Hanne Torjusen and Edvin Østergaard

*Recognizing the farmer: Local food systems can provide improved social conditions for farmers* .............................................................................. 53
  Helena Nordström Källström

*Agri-environmental Problems in Farming Systems of Central and Eastern European Countries Change During Transition 1989-2003* ......................................................................................................................................................... 63
  John Sumelius, Stefan Bäckman and Timo Sipiläinen

*Traditional Products and industrialization processes: The Coherence of Geographical Indications* ............................................................................... 69
  Maryline Filippi and Pierre Triboulet

*Sustainable Rural and Commercial Development (The BNU-Program): Participant Cooperation, Multi-Dimensionality and Learning* .............................................................................................................. 85
  Torger Gillebo

*How to analyse technical adaptability of dairy farms involved in quality cheese production? Case study of non-pasteurized cheese production with Protected Geographical Indication label in the Pyrenean Mountains* ........................................................................................................ 97
  Vincent Thénard, François Coleno, Jean-Pierre Theau, Laurent Marey and Michel Duru
WORKSHOP 2

The sustainability of small scale farming

Are Social and Human Capital Important in Promoting Continuity of Farming? Evidence from Polish Farmers
Axel Wolz, Jana Fritzsch and Klaus Reinsberg

Farming Systems Research and Consumer Behaviour Theory
Geoff Kaine, Jo Vigliaturo, Denise Bewsell and Neels Botha

The influence of agritourism on the human and social environment: The cases of Trikala and Ikaria in Greece
H. Theodoropoulou

Work and income patterns of men and women of Norwegian family farms: Masculinisation, feminization, or professionalisation of farm work?
Hilde Bjorkhaug and Arild Blekesaune

Pluriactivity and succession in small family farms: The case of two less favoured areas in Greece
I. Gidarakou, L. Kazakopoulos and A. Koutsouris

Early Experiences of Participatory Learning and Action Research with Organic Farmers in Sweden
Karin Eksvärd and David Gibbon

The Concept of Eco-regions in Austria
Markus Schermer

Conditions for sustainable farming systems: Lessons from implementation of the Territorial Farm Contract
Mohamed Gafsi

Assessing Socioeconomic Resilience of Rural Livelihood Systems in an Ecuadorian Agrosocioecosystem
Norman E. Breuer, Peter E. Hildebrand and Victor E. Cabrera

Meeting the challenges of change: Cattle farms in Vina (Cameroon) between opting for security, diversification or intensification
Patrice Djamen Nana

Organic Farming in Austria with the concept of Selbsternte: A new and innovative production system for small-scale farming connecting farmers and consumers
Paul Axmann and Christian R. Vogl

Rural landscapes: Case study of Village Plans in Central Portugal (“Network of Schist Villages”)
Paulo Carvalho

Constructing sustainable agriculture at local level. Insights from small-scale farming in the Alps
Philippe Fleury, Sandrine Petit, Ernst. Mattanovich, Giorgio De Ros and Valérie Miéville-Ott

Flexibility of suckler cattle farms in the face of uncertainty within the beef industry: A proposed definition
S. Ingrand, H. Bardey and J. Brossier

How to model work organisation in livestock farms implementing a combination of economic activities?
Sophie Madelrieux, Benoît Dedieu and Laurent Dobremez
WORKSHOP 3

Natural resources management and farm functions in landscape construction

Towards multi-functional agriculture – what motivates German farmers to realise biodiversity conservation? .......................... 283
A. Knierim and Dr. R. Siebert

Landscape Prototyping: towards an integrative approach for the design and analysis of multifunctional agricultural landscapes... 293
André Jellema, Walter A.H. Rossing and Paul F.M. Opdam

Water and wildlife on a commercial farm: multifunctional management of set-aside and other natural resources in lowland England............................................................................................................................................... 303
Chris Stoate

Struggling for Rural Environment: Conflicts between desires and needs in Portuguese rural areas ....................................... 311
Elisabete Figueiredo

Studying the Effect of Organic Farming on Rural Landscapes: Issues of Methodology and Scale........................................... 325
Gregor Levin

The Indeterminacy of Technical Effects: The Case of the 2nd. Generation Water Conservation Project, The Netherlands........... 335
Janice Jiggins and Niels Röling

Agricultural Land Design Modelling: a methodological proposal........................................................................................................ 349
Marc Benoît, Eric Kernéïs, Yves Pons, Alain Gerbaud, Sylvia Herrmann and Florence Le Ber

Nature management and livelihood strategies on Danish organic farms........................................................................................................ 361
Pia Frederiksen and Vibeke Langer

Combinations of productive and environmental functions in a farmland area: synergies and antagonisms: Method of analysis and application in a small area in a mixed crop-livestock farming area in France................................................................. 375
Rapey H., Klingelschmidt F., Josien E., Lardon S., Servière G. and Fiorelli C.

Farms considered as units of management of natural resources at various landscape scales: needs for concepts and methods.
Illustration with French cases of study ........................................................................................................................................... 387
Thenail, C., Joannon, A., Mignolet, C. and Maigrot, J.-L.

The Continuous Re-creation of a Swedish Rural Community: Moose hunting, The School, The Church, Agriculture .................... 399
Yvonne Gunnarsdotter

WORKSHOP 4

Knowing and Learning: labour and skills at stake for a multidimensional agriculture

Organising for change – a national approach to meet the challenge for the Australian dairy industry .............................. 413
A.E. Crawford, M.S. Paine and T.M. Davison

Farmers' expectations of farmers' organisations in Minas Gerais, Brazil: extension rhetoric or practice? ............................ 427
Ana Alice Vilas Boas and Patricia Goldey

Learning new skills by French farmers. Evolution and unevenness of the beliefs............................................................................... 439
Catherine Macombe
From one-off events to learning systems and communities of practice .......................................................... 449
Chris Blackmore

Preparing for a new agri-environment scheme in England: influences on farmer participation .................. 459
Chris Stoate

An everyday tale of farming folk ...................................................................................................................... 467
Colin Newsham

CTE as a process of competences’ transformation? ...................................................................................... 471

Using a landscape scale to approach resources management and farm functions: the case of vanishing wooded structures and small ruminants itinerancy over the agrarian matrix

José Castro and Marina Castro∗

Abstract

The agrarian policy of national governments and EU, practiced for decades, was part of a growth-oriented industrialization and economic policy. This had lead, among other things, to the loss of diversified rural landscapes, which had developed in the course of history; sites and utilization, both in area and time, tend to be standardized. As a consequence, not only habitats had been lost, which is documented by an increasing number of wildlife species threatened by extinction, but also a considerable number of domestic animal and plant species have become misplaced of their natural context, in despite of some of them have been artificially maintained last decade by compensatory issues of new “environment oriented” CAP.

Authors look upon two examples of threatened landscape process in three rural communities of Trás-os-Montes: (1) the vanishing punctual, linear and spatial wooded structures of agricultural matrix, and (2) the flocks’ itinerancy of native sheep and goats. In the first case, the reduction in punctual (since 1950 by -50 percent) and linear (since 1950 by -75 percent) wooded structures, as a result of functional lack such as fencing, animal forage, summer sheltering, handcraft tools, etc could have consequences in many landscape ecological process (soil loss, hydrological disturbance, seed bank removal, fragmentation, etc.). In the second case, new perennial plantations of olives and chestnuts, resulting in several constraints to animals’ circuits and forage resources availability, have disrupted traditional cereal open fields and spatial rotation. Implications for relationships of process on patterns in landscape dynamics, and incoherent consequences of financial support of some productions are discussed. The landscape scale has allowed the identification of some conflicts among environmental CAP issues for specific natural resources protection and the landscape functions in the farming system.
