

3rd Symposium on Medicinal Chemistry of University of Minho

May 26th, 2017

School of Science, Chemistry Department

University of Minho, Campus of Gualtar

Scientific Committee

Fernanda Proença - Department of Chemistry, University of Minho

Isabel Ferreira - Polytechnical Institute Bragança

M. Alice Carvalho - Department of Chemistry, University of Minho

A. Gil Fortes - Department of Chemistry, University of Minho

Luís S. Monteiro - Department of Chemistry, University of Minho

Organizing Committee

Maria Alice Carvalho

António Gil Fortes

Luís Monteiro

Ana Patrícia Lourenço (MSc student of Medicinal Chemistry)

Ana Rita Abreu (MSc student of Medicinal Chemistry)

Ana Rita Araújo (MSc student of Medicinal Chemistry)

André Carvalho (MSc student of Medicinal Chemistry)

David Freitas (MSc student of Medicinal Chemistry)

Diogo Lopes (MSc student of Medicinal Chemistry)

Inês Machado (MSc student of Medicinal Chemistry)

Joana Filipa Parente (MSc student of Medicinal Chemistry)

Juliana Rocha (MSc student of Medicinal Chemistry)

Mónica Fernandes (MSc student of Medicinal Chemistry)

Pedro Figueiredo (MSc student of Medicinal Chemistry)

Posters

- P01 Phenolic Profile, Tocopherols and Antioxidant Activity of Watercress** (41)
José Pinela
- P02 Serine HydroxymethylTransferase: Inhibit it or Improve it?** (42)
H. S. Fernandes
- P03 Organic acids, tocopherols and antioxidant activity of white and black garlic samples** (43)
Joana Botas
- P04 From the raw material to your headache** (44)
Iva Costa
- P05 Are you confident about your Chromatographic Result?** (45)
Katalin Kováts
- P06 Improving the bioactivity of medicinal plants using gamma radiation: Thymus vulgaris L. infusions as a case-study.** (46)
Eliana Pereira
- P07 The role of chamomile phenolic compounds in the development of dairy functional foods** (47)
C. Caleja
- P08 Rosa canina L. as new food ingredient an source of bioactive compounds** (48)
T.C. S. P. Pires
- P09 Synthesis of *N*-catechoyl phenylalanine and dehydrophenylalanine derivatives** (49)
I. Machado
- P10 Synthesis of the methyl esters of *N*-phenoyl and *N*-catechoyl dehydroalanine and dehydrophenylalanine** (50)
S. Oliveira
- P11 Synthesis of phenolic and catecholic amino acids by the modified multicomponent Ugi reaction** (51)
L.S. Monteiro
- P12 Synthesis of phenolic and catecholic amino acids by Michael addition to a dehydroalanine derivative** (52)
J. Parente
- P13 Theoretical and computational studies addressed to the stereo and regio- selective synthesis of polyhydroxylated sugar-like compounds** (53)
J. F. Rocha
- P14 *Pseudofistulina radicata* (Schwein) Burds: the first study focused on its antioxidant activity and bioactive compounds** (54)
Blanca N. Castaneda
- P15 Synthesis of a low molecular weight peptide hydrogelator based on dehydroamino acids** (55)
Rita L. Araújo
- P16 An efficient method for dehydration of 6-carbamoylpurines** (56)
Mónica C. S. Fernandes

- P17 Bis-dehydroamino acid derivatives as hydrogelators** (57)
Rita Nanim
- P18 Synthesis of polyhydroxylated pyrrolidines precursors, obtained from D-erythrose with potential enzymatic activity in glycosidases** (58)
David S. Freitas
- P19 Dehydroamino acid derivatives as fluorescent markers** (59)
Diogo Lopes
- P20 Multifunctional magnetic drug nanocarriers based on peptide-derived hydrogels containing Naproxen and/or RGD** (60)
Carlos A. B. Magalhães
- P21 Isolation and characterization of essential oils from selected plants** (61)
I. Machado
- P22 Profiling Antioxidant Vitamins and other Phytochemicals in Portuguese Tomato Landraces** (62)
C. Montoya
- P23 Synthesis and biological activity against *Mycobacterium tuberculosis* of 2,3-dihydroadenine derivatives** (63)
M. Alice Carvalho
- P24 2-Amino-6-cyanopurines: Novel Candidates as Fluorescent Probes in the Nucleic Acid Research** (64)
A. Patrícia Lourenço
- P25 Reactivity of 6-imidate-purines with benzylhydrazine** (65)
A. Rocha
- P26 Evaluation of the bioactive properties of a secondary metabolite produced by *Penicillium nordicum*** (66)
A. Wierzińska

Evaluation of the bioactive properties of a secondary metabolite produced by *Penicillium nordicum*A. Wierzińska^a, L. Barros^a, M. Sulyok^b, I.C.F.R. Ferreira^a, P. Rodrigues^a^a *Centro de Investigação de Montanha (CIMO), ESA, Instituto Politécnico de Bragança, Campus de Santa Apolónia, 5300-253 Bragança, Portugal*^b *University of Natural Resources and Life Sciences, Department for Agrobiotechnology, IFA-Tulln, Konrad Lorenz Str.20 - 3430 Tulln, Austria*

Fungi of the genus *Penicillium* are promising sources of bioactive substances. Fungal strains isolated from poorly characterized habitats are currently under active investigation as potential producers of biologically active compounds. *Penicillium nordicum* is mostly known by its ability to produce the mycotoxin ochratoxin A in several protein- and salt-rich food matrices like processed meat and cheese, but it can also produce an array of other secondary metabolites. In a previous study, strains of this species were found to produce, under specific growth conditions, one unidentified compound in apparently big amounts, without producing ochratoxin A.

The aim of the present study was to evaluate the bioactive properties of this compound in terms of antioxidant, antimicrobial, cytotoxic and herbicidal properties. For that purpose, the fungus was grown on ham-based medium and the aqueous extract of the compound was used for further tests.

The extract showed significant effects on seed germination as well as on root and shoot growth of tomato, lettuce, wheat and oat. The root growth inhibition ranged from 74% to 98%, and the shoot growth was reduced in 23 to 88%, being tomato the most sensitive plant. The extract did not show any cytotoxic activity in non-tumor porcine liver primary culture cells and human tumor cell lines. The antibacterial effect on human clinical isolates and antifungal effect on foodborne and environmental isolates was also not significant.

Pestalotin was the predominant compound in the fungal extract, with questiomycin and 7-hydroxypestalotin also being found at lower concentrations, as detected by Liquid Chromatography-Mass Spectrometry (HPLC-MS/MS) based multi-metabolite method.

The extract was considered as a potential bioherbicide without noticeable negative effects on human and animal cells and also on the environment. Further tests on herbicidal potential are now under development.

Acknowledgments

The authors are grateful to the Foundation for Science and Technology (FCT, Portugal) and FEDER under Programme PT2020 for financial support to CIMO (UID/AGR/00690/2013)
