TABLE OF CONTENTS

Preface	xix
International Scientific Committee	xx
Organizing Committee and Secretariat	xxi
Acknowledgments	xxii
List of Tracks and Symposia	xxiii
KEYNOTE PAPERS	1
6101 COMPUTATIONAL CONTACT MECHANICS USING VARIATIONAL INEQUALITIES: THEORY AND APPLICATIONS. Shaker A. Meguid	3
6102 CRASHWORTHINESS OF HYBRID METAL / FIBER-REINFORCED PLASTIC STRUCTURES. Thomas Tröster, Corin Reuter, Zheng Wang	5
6103 MDO APPROACH TO OPTIMAL VARIABLE STIFFNESS STRUCTURE DESIGN. Michel J.L. van Tooren	7
TRACKS / MAIN TOPICS	9
TOPIC-A: COMPUTATIONAL MECHANICS	11
6194 STOCHASTIC EFFECTS OF CRACKED BEAMS SUBJECTED TO RANDOM MOVING LOADS. H. S. Zibdeh, Y. Qaissi	13
6203 NUMERICAL EVALUATION OF THE MIXED-MODE FRACTURE OF COMPOSITE BONDED JOINTS. Manuel A.S. Santos, Raul D.S.G. Campilho	15
6238 TRANSIENT ELASTICITY MODELING OF WAVE-SHAPE FORMATION UNDER EXPLOSION WELDING. Ireneusz Szachogluchowicz, Lucjan Sniezek, Volodymyr Hutsaylyuk, Heorhiy Sulym, Iaroslav Pasternak, Ihor Turchyn	17
6251 CONFIDENCE BOUNDS ON PROBABILITY OF FAILURE USING MHDMMR. A. S. Balu, B. N. Rao	19
6257 SIMULATION OF THE INFLUENCE OF STEEL FIBERS ON THE SHEAR BEHAVIOR OF REINFORCED CONCRETE BEAMS. Mohand Said Kachi, Zarga Djelloul, Barboura Salma, Bouafia Youcef	21
6264 MODAL ANALYSIS OF A SOLID RUNNER FOR SMALL WIND TURBINES. Nicolae Constantin, Ștefan Sorohan, Constantin Valentin Epuran	23
6357 AXIAL BUCKLING RESISTANCE OF PARTIALLY ENCASED COLUMNS. Abdelkadir Fellouh, Nourredine Benlakehal, Paulo A. G. Piloto, A. B. Ramos-Gavilán, Luís M. R. Mesquita	25
6371 SHORTCUT ESTIMATION OF CONFIDENCE IN THE OUTCOME OF THE VULNERABILITY ASSESSMENT OF A STRUCTURAL SYSTEM WITH CAPACITY EXPRESSED BY A FUNCTION G. Marco Vailati, Giorgio Monti, Giovanna Valeri	27
6377 NUMERICAL EVALUATION OF THE BEHAVIOR OF TUBULAR COLUMNS IN THE CONNECTIONS TO I BEAMS WITH WELDED REVERSE CHANNEL. Luís Magalhães, Carlos Rebelo, Sandra Jordão	29

6313	ANALYSIS OF CUTTING FORCE DURING THE MILLING OF Co-28Cr-6Mo ALLOY FOR A FEMORAL PROTHESIS. Pedro Ferreira, Fernando Simões, Carlos Relvas	177
6332	MANUFACTURE OF CUSTOMIZED CRANIAL IMPLANT. Jovani Castelan, Daniel Fritzen, Anderson Daleffe, Lirio Schaeffer	179
6339	A MODEL OF THE HUMAN HEARING SYSTEM TO REPRODUCE THE MOST COMMON PATHOLOGIES. Daniel Carmona, Leonardo Molisani, Marla E. Bellini	181
6356	INFLUENCE OF BONE DRILLING PARAMETERS ON THE THERMAL STRESS DISTRIBUTION. Maria G. Fernandes, Elza M. Fonseca, Renato N. Jorge	183
6398	MODELLING OF ANISOTROPIC HYPERELASTIC MATERIALS WITH DAMAGE. João P. Ferreira, Marco Parente, Renato N. Jorge	185
TOPIC-J: CIVIL ENGINEERING APPLICATIONS		187
6217	PREDICTION OF CORROSION-FREE SERVICE LIFE OF CONCRETE STRUCTURES ALONG COASTAL REGIONS: A NUMERICAL FRAMEWORK. S. Muthulingam, B. N. Rao	189
6231	ASSESSING THE EARTHWORKS QUALITY CONTROL WITH INDIRECT METHODS. Matej Blasko, Silvia Kuricova, Katarina Zgutova	191
6235	ANALYSIS OF CRACKING IN RC TENSILE MEMBERS USING BEAM FINITE ELEMENTS WITH EMBEDDED TRANSVERSAL CRACKING. Paulo Sculac, G. Jelenic	193
6242	PREDICTION OF UNSATURATED PERMEABILITY FUNCTIONS FOR CLAYEY SOIL. Fatma Louati, H. Trabelsi, M. Jamei	195
6256	EFFECT OF THE GLASS POWDER AND THE POLYPROPYLENE FIBERS ON THE CHARACTERISTICS OF HIGH-PERFORMANCE CONCRETES. M. Belkadi, R. Chaid, Arnaud Perrot, Nacira Saoudi	197
6265	AN ENGINEERING DEMAND PARAMETER TO ASSESS GLOBAL SEISMIC PERFORMANCE IN 3D BUILDINGS. Despoina Skoulidou, Xavier Romão	199
6294	A PROBABILISTIC METHOD FOR IDENTIFICATION OF VEHICLE LOADS AND SYSTEM PARAMETERS FOR REINFORCED CONCRETE BRIDGES. Sebastian Zorn, Jörg F. Unger, Ronald Schneider	201
6298	CHARACTERIZATION OF CONCRETE AND FIBERS LENGTH PARAMETERS IN FORMULATION TYPE. Nacira Saoudi, Brahim Saoudi, Hayet Cherfa, Boujemaa Bezzazi	203
6305	EXPERIMENTAL INVESTIGATION ON THE PROPERTIES AND PERFORMANCE OF SELF-COMPACTING CONCRETE WITH VEGETABLE AND SYNTHETIC FIBERS (POLYPROPYLENE SHIV HEMP HEMP). A. Belkadi, C. Amouri, H. Houari, A. Guettala	205
6317	ANALYSIS OF CONTINUOUS AND SEGMENTED PIPELINE IN LIQUEFIABLE SOIL. Neelima Satyam, Durga Prasad	207
6322	EXPERIMENTAL INVESTIGATION OF CONCRETE EXTERNALLY CONFINED BY CFRP COMPOSITES. Riad Benzaid, Habib-Abdelhak Mesbah, Bouhabila Amel	209
6328	GEOLOGICAL AUSCULTATION OF A BASEMENT ROCK BY APPLICATION OF SEISMIC IMAGING. CASE OF SUPPORT OF TABELLOUT-DAM (JIJEL-ALGERIA). Mustapha Tekkouk, Riad Benzaid, Juan Martinez	211
6342	SEISMIC VULNERABILITY ASSESSMENT FOR CONCRETE BRIDGES BY DEVELOPING FRAGILITY CURVES. Araliya Mosleh, Humberto Varum, José Jara, Mehran S. Razzaghi	213

ABSTRACT

Material removal through the drilling involves two important processes. The first one is drilling of material by cutting edges of the drill bit and the second one is the friction generated by the contact between drill bit and hole wall of the material. Both processes lead to heat generation during drilling. In clinical practice, drilling procedures and high-speed cutting tools are often applied on bone tissue. These operations are associated to complications such as thermal osteonecrosis due to the excessive heat generation and mechanical damage due to the excessive levels of penetration force. The development of additional tools for accurately simulating the drilling is essential to predict the risk of thermo-mechanical damage during bone drilling. This paper investigates the thermal and mechanical damage in bone tissue induced by different parameters. An experimental and numerical approach of bone drilling has been conducted. A three-dimensional dynamic numerical model was developed to simulate the mechanical and thermal stresses generated during the drilling. The numerical model incorporates the geometrical and dynamic characteristics involved in the drilling processes. The numerical analysis has been validated by experimental tests using polyurethane foam materials with similar mechanical properties to the human bone.

Keywords: Bone drilling, damage, experimental testing, numerical modelling.

INTRODUCTION

Drilling is one of the most frequent conventional mechanical processes in machining operations. The industrial concepts of productivity and surface integrity in material removal processes can be translated to medical applications. In this context, reduced drilling time is related to short surgery global time and bone integrity is related to the absence of drilling induced damage (Marco et al. 2015). The common problems associated with the drilling are thermal and mechanical damage due the excessive heat and the cut effort achieved during the process, (Augustin et al. 2008; Fernandes et al. 2015).

Clinical problems such as implant failures have been reported on the literature and are associated with the thermal and mechanical damage which occur during the drilling (Agustin et al. 2008). The importance of this problems have motivated the development of different methodologies. However, it is difficult to draw definitive conclusions due to the wide variety of involved parameters, such as the tool geometry and drilling parameters.

The development of accurate numerical models can help in the understanding of bone drilling and thus in the analysis and definition of drilling operations in bone tissues.

This study presents a three-dimensional dynamic thermomechanical model to simulate the thermal stresses during bone drilling. The numerical model was validated with experimental tests performed on polyurethane foam materials instrumented with strain gauges to measure the strains and thermocouples to measure the temperature distribution inside the blocks (Figure 1). Also, the temperatures on the drill bit and block surfaces were measured with a thermal camera. The effects of some drilling parameters, such as drill speed and feed-rate were studied.

Fig. 1 - Experimental and numerical model of bone drilling.

RESULTS AND CONCLUSIONS

A three-dimensional elastic plastic dynamic model to simulate the drill bit penetration into the bone tissue was developed. Thermal stresses involved in the drilling processes were obtained and compared with experimental tests. The results show that thermal stresses generated in the material tend to increase with tool penetration. The numerical results are in good agreement with experimental results. The proposed numerical model can be used to simulate the behaviour bone during the drilling process, considering different parameters.
