

12.<sup>a</sup> Reunião do Grupo de Glúcidos

# Carboidratos em Portugal e potencial de diferenciação internacional

Programa e livro de resumos

Universidade de Aveiro, Portugal  
11 - 13 setembro 2017

## **12.<sup>a</sup> Reunião do Grupo de Glúcidos**

### **Carboidratos em Portugal e potencial de diferenciação internacional**

**Aveiro, 11-13 setembro 2017**

**SOCIEDADE PORTUGUESA DE QUÍMICA**

**universidade  
de aveiro**

## COMISSÃO ORGANIZADORA

Chair: Manuel A. Coimbra (UA)  
Artur Silva (UA) - Presidente da SPQ  
Ana Moreira (UA)  
Carmen Freire (UA)  
Cláudia Nunes (UA)  
Cláudia Passos (UA)  
Dulce Helena Teixeira (UA)  
Elisabete Coelho (UA)  
Idalina Gonçalves (UA)  
João Mano (UA)  
Paula Ferreira (UA)

## COMISSÃO CIENTÍFICA

Manuel A. Coimbra (UA) - Chair  
Amélia Rauter (FCUL) - Chair XXIX International Carbohydrate Symposium  
Artur Silva (UA) - Presidente da SPQ  
Dulcineia Ferreira (IPV) - Presidente do Grupo de Glúcidos  
Albertino Figueiredo (UBI)  
Ana Maria Gomes (ESB)  
Angelina Palma (UNL)  
António Vicente (UM)  
Armando Silvestre (UA)  
Artur Cavaco-Paulo (UM)  
Carmen Freire (UA)  
Fernando Nunes (UTAD)  
Hans Peter Wessel (UA)  
Isabel Ferreira (IPB)  
Isabel Ismael (UBI)  
João Mano (UA)  
José A. Lopes da Silva (UA)  
Leticia Estevinho (IPB)  
Miguel Gama (UM)  
Pilar Gonçalves (FEUP)  
Rosário Domingues (UA)  
Victor Freitas (FCUP)

K14 - Role of Cellulosomes in the deconstruction of complex carbohydrates .....	40
K15 - Immunostimulatory polysaccharides from the hot water extracts of prickled broom ( <i>P. tridentatum</i> (L.) Willk) dried inflorescences .....	41
ORAIS .....	43
O01 - Bacterial Cellulose: a nature's made nanostructured material for drug delivery .....	45
O02 - Development of bacterial cellulose wound dressings with controlled delivery of vitamin D <sub>3</sub> .....	46
O03 - Deciphering ErbB2 Glycosylation Profile in Gastric Cancer Cells .....	47
O04 - Sialic acids as immune regulators of antigen presentation in dendritic cells .....	48
O05 - Apple pomace arabinan – phloridzin binding capacity .....	49
O06 - Reducing negative volatile phenols in red wine by chitosan: impact on wine quality .....	50
O07 - Dextrin-based hydrogel for the development of an injectable bone substitute.....	51
O08 - Supramolecular hydrogels based on the co-assembly of simple carbohydrates and peptide amphiphiles for biological applications.....	52
O09 - Cyclodextrins: impact on anthocyanins thermal and gastrointestinal stability .....	53
O10 - The glycosylic profile of edible flowers while alternative foods.....	54
O11 - Mimicking <i>Plusiotis Resplendens</i> Cuticule with a New Photonic Properties of Cellulose Nanocrystals Films .....	55
O12 - Designing of a laccase super-catalyst.....	56
O13 - The role of choline chloride-based Deep Eutectic Solvent (DES) and curcumin on chitosan films properties.....	57
O14 - "POTATOPLASTIC": Development of starch-based bioplastics using potato chips industry byproducts .....	58
O15 - Hemicellulose extraction using Deep Eutectic Solvents for Biorefinery purposes.....	59
O16 - Straw pentoses for the production of added-value products .....	60
O17 - Identification and structural-functional characterization of a new chitin-binding protein module from <i>Clostridium thermocellum</i> .....	61
O18 - Glycan recognition in the human gut – A combined approach to unravel microbiome strategies.....	62
O19 - Potential of thiol-amphiphile glycosaminoglycans as redox-sensitive nanoparticles .....	63
O20 - Modification of cyclo-oligosaccharides for drug encapsulation .....	64
O21 - Carcinoembryonic antigen carries $\alpha$ 2-3 linked sialic acid on type II chains and is implicated in the metastatic potential of gastric cancer cells.....	65
O22 - Hypoxia enhances the malignant nature of bladder cancer cells and concomitantly antagonizes protein O-glycosylation extension .....	66
O23 - Targeted O-glycoproteomics explored increased sialylation and identified MUC16 as a poor prognosis biomarker in advanced stage bladder tumours .....	67
O24 - Structural Basis for the Highly Selective Recognition of Di-Glucosylated N-glycans by Human Malectin in the Endoplasmic Reticulum .....	68
O25 - Magnetic and electrical conductive chitosan-based bionanocomposites .....	69
O26 - Cellulose nanocrystals coated with gold nanoparticles and folic acid-conjugated chitosan as candidates for nanotheranostic systems .....	70
O27 - <i>In vitro</i> digestions to predict the glycemic index of rice .....	71

O28 - The effect of immobilized Hyaluronic Acid on CD44-overexpressing MKN45 gastric cancer cell line .....	72
O29 - Influence of ionizing radiation on the free sugars content of several aromatic and medicinal plants.....	73
O30 - Composition in sugars of white and black garlic from different origins.....	74
O31 - Structural characterization of polysaccharides from <i>Nannochloropsis oculata</i> and their use in microarrays .....	75
O32 - Incorporation of an extract rich in rosmarinic acid into cupcakes: Influence on the sugars and total carbohydrates composition.....	76
O33 - Protein-Glycan driven quinary interactions under macromolecular crowding unveiled by NMR Spectroscopy.....	77
O34 - Non-enzymatic transglycosylation reactions and Maillard reaction: a competition with relevance for coffee melanoidins formation .....	78
O35 - Which arabinogalactans structural features can contribute to <i>in vitro</i> immunostimulatory activity of coffee?.....	79
O36 - Chemical synthesis of GaINAc mimetics aiming macrophage galactose C-type lectin and block viral infections .....	80
PÓSTERES .....	81

**PROGRAMA CIENTÍFICO**

Segunda-feira, 11 de setembro de 2017		
10h00	10h50	<b>Registo</b> - Átrio da Escola Superior de Saúde, Campus do Crasto
10h50	11h10	<b>Sessão de Abertura</b> Anfiteatro 30A.1.14
11h10	12h10	<b>Chairperson: Amélia Rauter</b> Anfiteatro 30A.1.14
11h10	11h40	PL01 - Patrick Rollin (U Orléans) <i>Thioglycosides in our daily vegetables?</i>
11h40	12h10	PL02 - Susana Dias Lucas (Hovione) <i>Carbohydrates: from bench to market – A process chemistry view</i>
<b>Sessões Paralelas</b>		
<b>Bacterial Cellulose</b>		
12h10	13h00	<b>Chairperson: José A Lopes da Silva</b> Anfiteatro 30A.1.14
12h10	12h30	K01 - Fernando Dourado (UM) <i>Bacterial Nanocellulose: a novel marketable multifunctional biopolymer</i>
12h30	12h45	O01 - Carla Vilela (UA) <i>Bacterial Cellulose: a nature's made nanostructured material for drug delivery</i>
12h45	13h00	O02 - Ana Cristina Rodrigues (UM) <i>Development of bacterial cellulose wound dressings with controlled delivery of vitamin D<sub>3</sub></i>
<b>Glycobiology</b>		
12h10	13h00	<b>Chairperson: Angelina Palma</b> Anfiteatro 30A.2.05
12h10	12h30	K02 - Alexandre Ferreira (IPO) <i>Circulating tumor cells analysis using glycan-affinity microfluidic devices: Possible Clinical Implications towards precision oncology</i>
12h30	12h45	O03 - Henrique Duarte (I3SUP) <i>Deciphering ErbB2 glycosylation profile in gastric cancer cells</i>
12h45	13h00	O04 - Zélia Silva (UNL) <i>Sialic acids as immune regulators of antigen presentation in dendritic cells</i>
<b>Carbohydrates in Food</b>		
12h10	13h00	<b>Chairperson: Dulcineia Wessel</b> sala 30B.2.16
12h10	12h30	K03 - Susana Soares (FCUP) <i>Carbohydrates and food organoleptic properties: color and taste modulation</i>
12h30	12h45	O05 - Pedro Fernandes (UA) <i>Apple pomace arabinan – phloridzin binding capacity</i>
12h45	13h00	O06 - Luís Filipe Ribeiro (UTAD) <i>Reducing negative volatile phenols in red wine by chitosan: impact on wine quality</i>
13h00	14h30	<b>Almoço</b>

14h30	15h30	<b>Chairperson: João Mano</b> Anfiteatro 30A 1.14
14h30	15h00	PL03 - Ilídio Correia (UBI) <i>Biomedical applications of carbohydrates</i>
15h00	15h30	PL04 - Iva Pashkuleva (UM) <i>Engineering supramolecular functional biomaterials from glycans</i>
<b>Sessões Paralelas</b>		
15h30	16h20	<b>Biomedical Applications</b> <b>Chairperson: Celso Reis</b> Anfiteatro 30A 1.14
15h30	15h50	K04 - Isabel Coelho (UNL) <i>Membranes from microbial polysaccharides</i>
15h50	16h05	O07 - Isabel Pereira (UM) <i>Dextrin-based hydrogel for the development of an injectable bone substitute</i>
16h05	16h20	O08 - Alexandra Brito (UM) <i>Supramolecular hydrogels based on the co-assembly of simple carbohydrates and peptide amphiphiles for biological applications</i>
15h30	16h20	<b>Novel Foods and Packaging</b> <b>Chairperson: Fernando Dourado</b> Anfiteatro 30A 2.05
15h30	15h50	K05 - Dmitry Evtugin (UA) <i>Targeted modification of glucuronoxylan for food packaging applications</i>
15h50	16h05	O09 - Ana Luísa Fernandes (UP) <i>Cyclodextrins: impact on anthocyanins thermal and gastrointestinal stability</i>
16h05	16h20	O10 - Tânia Pires (IPB) <i>The glycosyl profile of edible flowers while alternative foods</i>
15h30	16h20	<b>Chemical and Enzymatic Synthesis</b> <b>Chairperson: Isabel Ismael</b> sala 30B 2.16
15h30	15h50	K06 - Maria Teresa Blázquez-Sánchez (FCUL) <i>Synthesis of C-glycosyl phenols as a strategy for the treatment of amyloid diseases</i>
15h50	16h05	O11 - Susete Fernandes (UNL) <i>Mimicking plusiotis resplendens cuticle with a new photonic properties of cellulose nanocrystals films</i>
16h05	16h20	O12 - Jing Su (UM) <i>Designing of a laccase super-catalyst</i>
16h20	17h30	<b>Café + Pósteres</b>
17h30	18h30	<b>Chairperson: Patrick Rollin</b> Anfiteatro 30A 1.14
17h30	18h00	PL05 - Maria Helena Godinho (CT-UNL) <i>Cellulose bio-mimetic materials</i>
18h00	18h30	PL06 - Raul Figueiro (UM) <i>Natural fibers: challenges for advanced materials and products</i>
19h00		<b>Receção de Boas-Vindas</b>

## O10 - The glycosylic profile of edible flowers while alternative foods

Edible flowers have been used in the human diet with secular records in Asia, ancient Greece and Rome, medieval France, England and the Middle East region [1]. Due to consumer's interest in healthier living habits, edible flowers have performed an increasingly important function. These flowers are abundant natural sources of phytochemical compounds around the world with health benefits [2]. The aim of this study was to determine the individual profile of soluble sugars and glycosylated flavonoids in petals and respective infusions of four edible flower species (*Dahlia mignon*, *Rose damascena* 'Alexandria' and *R. Gallica* 'Francesa' grafted on *R. canina*, *Calendula officinalis* L. and *Centaurea cyanus* L.). The soluble sugars were determined by high performance liquid chromatography coupled to a refractive index detector (HPLC-RI) and quantification was performed using the internal standard (melezitose) method. The phenolic profile analysis was performed by LC-DAD-ESI/MSn. Fructose, glucose and sucrose were found in the petals and in the infusions of the different species. Fructose was the main sugar present in three of the studied edible flowers, except for the *Calendula officinalis* L. where sucrose was the predominant sugar. Dahlia and rose petals ( $10.24 \pm 0.62$  and  $10.75 \pm 1.05$  g/100 g dry weight), and their infusions ( $0.19 \pm 0.02$  and  $0.19 \pm 0.01$  mg/100 mL respectively) presented higher values of total sugars, while the centaurea petals ( $1.5 \pm 0.1$  g/100 g) and its infusion ( $0.14 \pm 0.01$  mg/100 mL) presented lower values. The phenolic profile, of dahlia sample presented a total of 21 compounds, the main being naringenin-3-O-glucoside. The rose petals presented 12 flavonoids (kaempferol- and quercetin-3-O-glucosides as major compounds). Calendula presented a profile with 13 phenolic compounds (isorhamnetin-3-O-rutinoside as the most abundant molecule) and centaurea flowers presented 14 polyphenols (apigenin-O-glucuronide as the most abundant).

These results confirm the potential of edible flowers as a source of bioactive compounds and their applicability, not only as ingredients in gourmet cooking but also as sources of bioactive phytochemicals with interest for the pharmaceutical and food industries.
